P2-ONLY CHANGED @ 0.1

1,652

ABILITY-ONLY CHANGED @ 0.1

1,639

COMBINED CHANGED @ 0.1

What this report measures

The report runs four matched scenarios: (1) baseline with equal Phoenix weights and no ability-distance penalty; (2) Phoenix 2 emphasis only, using 1:2 source weights without the penalty; (3) nearby ability only, using equal source weights with inverse-square distance decay and half weight one level from the midpoint; and (4) the combined/current algorithm, using both changes. Every run uses the same chart catalog and player captures.

The appendix lists every eligible chart, including unchanged displayed ratings. Each isolated estimate and the combined estimate are compared with the same baseline. Raw deltas preserve more precision; Delta @ 0.1 is the visible re-rating.

Source captures: Phoenix 1 - 2026-08-08T06:30:03.731635Z; Phoenix 2 - 2026-08-11T06:03:27.565785Z. Report generated 2026-08-17T14:25:06+09:00.

Executive summary

The isolated runs show what each change does on its own relative to the old baseline. The combined/current run applies both changes together. Because the estimator recalibrates within each official level after weighting the observations, the combined delta does not have to equal the arithmetic sum of the two isolated deltas.

Impact by algorithm component

Scenario vs baseline	Changed @ 0.1	Changed %	Median raw	Mean raw	P90 raw	Max raw
Phoenix 2 emphasis only	185	7.22%	0.005	0.008	0.016	0.077
Nearby ability only	1,652	64.48%	0.075	0.123	0.316	1.008
Combined/current	1,639	63.97%	0.073	0.123	0.316	1.048

Visible changes by mode

How to read the appendix

P1 and P2 are the distinct contributing-player counts reported by the model for each chart. N is the player-balanced contributor count. Status is the model's evidence classification. The three scenario groups each show the scenario estimate, its raw delta from baseline, and its visible delta at 0.1. The Chart ID column uses the first eight characters of the full unique identifier for compact disambiguation.

Ability is source-specific, not pooled: Phoenix 1 observations use the player's Phoenix 1 ranks 11-30 ability window and Phoenix 2 observations use the Phoenix 2 ranks 11-30 window. The report's after run includes both parts of the new algorithm: Phoenix 2 double source weight and inverse-square nearby-ability weighting. The before run includes neither part.

Complete chart-by-chart appendix

All level-16+ charts with finite estimates in all four runs are included below, sorted by mode, official level, song, step artist, and chart ID. Each scenario delta is measured from the baseline.
